

```
# This is to test PDF outlines. We use some rather non-sensical
# code below that must be syntactically correct!
```

```
def foo0():
    return

class Bar0:
    def __init__(self):
        pass
    def __str__(self):
        return ''

def foo1():
    if 1:
        return
    else:
        pass
        pass

def foo2():
    def foo2a():
        return
    def foo2b():
        return
    return foo2a()

def foo3(): pass

class Bar1:
    def __init__(self):
        pass
    def __str__(self):
        def bar1():
            class Bar1a: pass
            class Bar1b: pass
            return ''
        return bar1()

if __name__ == '__main__':
    def foo4():
        pass

    foo0()
    foo1()
    foo2()
    foo3()
    foo4()

    b0 = Bar0()
    b1 = Bar1()

    print 'Syntax ok.'
```
